

## RECESSED L.E.D. WALL LIGHTS

A range of high quality interior recessed L.E.D. indicator luminaires with integral power supply suitable for a wide range of applications. Manufactured from fabricated housing with die-cast aluminium front bezel which is held in place by two retaining springs for ease of installation. Internal L.E.D. module features side mounted diodes to eliminate light spots on the diffused front glass for even illumination. Available either with pressure spring clips for mounting within a solid surface, or with conventional mounting springs for mounting in plasterboard or ceilings. All versions incorporate integral power supply mounted on rear of housing. Finished in textured silver (RAL9006) as standard. With other colours to order.

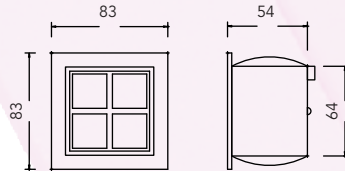

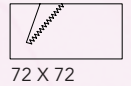

**Pressure Spring Clips**
