

L.E.D. BESPOKE PRODUCTS

All Sovereign® 5mm L.E.D. modules are designed and produced in-house.

This gives us the opportunity to provide L.E.D. solutions to suit the clients requirements, either from standard products, variants of standard products or even completely bespoke arrays.

We are often able to incorporate L.E.D. arrays within many of our wide range of existing luminaire housings, thus keeping costs to a minimum.

Our flexible production facility also enables us to offer specific housings from a choice of processes, including; machining, metal spinning, metal turning and casting etc.

We are able to design and produce power supplies to suit each application, although many of our standard L.E.D. units incorporate integral fully regulated power supplies as standard.
